

SECTION A: READING SKILLS

(20 MARKS)

1. Read the following passage carefully:

1. Floods are not new to India and this subcontinent, but in recent years the problem of flooding has received much greater attention, perhaps largely because it has led to greater damage now than it did in the past. Even though information on the impending occurrence of floods is now more accurate and certainly more timely, often there is very little time or support infrastructure in place by which damage can be minimised. This is particularly true in the case of flash floods resulting from sudden and excessive heavy rain.

2. In the case of India, Flooding is very much related to the seasonal nature of our rainfall. The monsoons are spread over a short period during the year and often bring a concentrated volume of rain, which cannot be absorbed by the earth and finds an outlet only in the form of streams that join up with our major river systems. Flooding due to heavy rain is confined not only to the main rivers of the country, but also affects smaller tributaries and streams. Once these streams spill over their banks they could cause excessive harm. mainly because those living near the banks of these streams, particularly in mountain areas, do not have easy recourse to moving away quickly.

3. One major factor that could lead to a higher severity of flooding in the future is the danger of climate change. While the evidence of the nature of impacts, resulting from climate change on precipitation and flooding at the regional level, is not entirely clear, it could happen that the Indian subcontinent witnesses and suffers the effects of a significantly changed pattern of monsoons. One set of scientists has estimated that the monsoons could be shorter in duration but far more intensive; in other words, much greater precipitation would take place in a much shorter period of time, thereby increasing the danger of floods. Climate change is the result of human actions through the increased concentration of greenhouse gases in the atmosphere, of which carbon dioxide is the most prominent.

4. At the local level also human actions have heightened the danger of floods through the cutting of trees in the mountains as well as in the plains. In case of India, the ecological damage through deforestation of the Himalayas has led to large-scale erosion of the mountain slopes and high levels of siltation. These lead to the deposition of silt on the riverbeds in the plains and hence spillover of water whenever the volume in the river reaches a certain level. With siltation on the riverbeds, flooding occurs even at very shallow water levels. The vulnerability of the population has increased substantially because of slum population pressures. An example is the stubborn and perhaps helpless settling of dwellers on the banks of the river Yamuna in Delhi, who become victims of flooding. What is a mere trickle most of the year, bursts its banks during the monsoons, as has been the case in recent years.

5. Flood forecasting is critical to minimising the damage from floods. It is for this reason that the Central Water Commission has set up a network of forecasting stations, which cover the most important flood-prone interstate rivers in the country. These stations produce forecasts that are used to alert the public and to mobilize various official agencies so that they take both preventive as well as relief measures, whenever required. However, even in cases where forecasts have been timely and generally accurate, people have often been reluctant to move away, because in most cases they lack the means and physical options for moving away from a danger zone to one that is relatively safe. In the case of flash floods, forecasts are difficult to make, and often the time available for relief is very short.

Based on your understanding of the passage, answer the questions given below:

(10×1=10)

2. Read the following passage carefully:

1. Unsafe water kills more people each year than do war and all other forms of violence combined. Meanwhile, our drinkable water sources are finite less than 1 per cent of the Earth's freshwater is actually accessible to us. Without action, the challenges will only increase by 2050, when global demand for freshwater is expected to be one-third greater than it is now.

2. Water is uniquely vulnerable to pollution. Known as a "universal solvent", water is able to dissolve more substances than any other liquid on Earth. Water pollution is the release of substances into subsurface groundwater or into lakes, streams, rivers, estuaries, and oceans to the point where the substances interfere with beneficial use of the water or with the natural functioning of ecosystems. In addition to the release of substances, such as chemicals, trash, or microorganisms, water pollution may also include the release of energy, in the form of radioactivity or heat, into bodies of water. The key causatives of water pollution in India are urbanization, deforestation, industrial effluents and agricultural run-offs with the use of insecticides and pesticides. The other causes are social and religious offerings in water bodies and the use of detergents and fertilizers.

3. Water pollution can have disastrous consequences on the ecosystem. Furthermore, toxic chemicals can travel through the food chain and get into our bodies, causing diseases and death.

4. There is no single or simple answer to stop the water pollution crisis. However, there are many solutions to prevent water pollution, both in our daily lives and within industries. Wastewater treatment, reducing plastic water management and ozone in addition to this, we must have water-efficient toilets, stormwater management and ozone wastewater treatment.

आज का युग कंप्यूटर, लैपटॉप, मोबाइल जैसी अत्याधुनिक सुविधाओं से समृद्ध है। इंटरनेट के प्रयोग ने इसे और अधिक प्रभावी बना दिया है। आज इंटरनेट ने एक पूरी आभासी दुनिया हमारे सामने खड़ी कर दी है। एक बड़ी दुनिया सिमटकर ग्लोबल विलेज यानी वैश्विक गाँव बन गई है। लेकिन हमें यहाँ यह ध्यान रखना है कि यह आभासी दुनिया वास्तविक नहीं है, यह अपने आस-पास की पारिवारिक व सामाजिक रिश्तों से खिलखिलाती दुनिया की तरह प्यार और भरोसे से भरी-भरी नहीं है। आज एक छोटे-से स्मार्ट फ़ोन में सबकुछ समा गया है। इससे जीवन को बहुत सारी सहूलियतें मिल गई हैं, किंतु यह भी एक कटु सत्य है कि इसकी आभासी दुनिया ने हमसे अपने व परिवार के लिए जो स्नेह तथा विश्वास को पोषित करने वाले पल थे, वे छीन लिए हैं। हम घर में होकर भी कई बार घर में नहीं होते, बल्कि इसकी आभासी दुनिया में खोए रहते हैं। आज हम ज़रा-सी देर के लिए भी अपने मोबाइल फ़ोन से अलग नहीं रह सकते। थोड़ी-थोड़ी देर में व्हाट्सएप चैक करने जैसी आदतें सिद्ध करती हैं कि हम पूरी तरह इसके आदी हो चुके हैं। इसकी अति को देखते हुए कुछ कंपनियों, फ़ैक्ट्रियों आदि ने कार्य के समय स्मार्ट फ़ोन रखने पर पूरी तरह रोक लगा दी है। इसकी लत के कारण आज अपनों की ज़रूरतों व उनके उल्लास की जगह लंबी फ्रेंड लिस्ट तथा हमारी पोस्ट पर आने वाले कमेंट्स आज हमारे लिए बेहद ज़रूरी हो गए हैं। आज ज़रूरत है कि हम इसकी लत से छुटकारा पाएँ और इसका प्रयोग केवल उतना ही करें, जितना हमारे लिए ज़रूरी है। और हाँ, यदि सप्ताह में एक बार डिजिटल उपवास रखकर वह समय खुद को और परिवार को दें, तो पारिवारिक जीवन और सिकुड़ते जा रहे स्नेहिल संबंध सुरभित अवश्य होंगे और ऐसा होना इस आभासी दुनिया वाले युग में किसी वरदान से कम न होगा।

When oxygen combines with other elements or compounds, the process is called oxidation the substances that combine with oxygen are said to have been oxidized.

The reduction is exactly the opposite of oxidation. If a substance loses oxygen during a reaction, it is said to be reduced. When hydrogen burns the hydrogen combines with oxygen to form water $2\text{H}_2 + \text{O}_2 = \text{H}_2\text{O}$

The hydrogen is oxidized in this reaction, but at the same time, the oxygen is reduced. Whatever oxidation occurs reduction must also occur.

Environmental triggers such as light, or gravity will change the directions that plant parts grow in. These directional, or tropic, movements can be either towards the stimulus or away from it. So, in two different kinds of phototropic movement, shoots respond by bending towards light while roots respond by bending away from it. How does this help the plant? Plants show tropism in response to other stimuli as well. The roots of a plant always grow downwards while the shoots usually grow upwards and away from the earth. This upward and downward growth of shoots and roots, respectively, in response to the pull of earth or gravity, is, obviously, geotropism. If 'hydro' means water and 'chemo' refers to chemicals, what would 'hydrotropism' and 'chemotropism' mean? Can we think of examples of these kinds of directional growth movements? One example of chemotropism is the growth of pollen tubes towards ovules, about which we will learn more when we examine the reproductive processes of living organisms.

The first clear expression of nationalism came with the French Revolution in 1789. France was a full-fledged territorial state in 1789 under the rule of an absolute monarch. The political and constitutional changes that came in the wake of the French Revolution led to the transfer of sovereignty from the monarchy to a body of French citizens. The revolution proclaimed that it was the people who would henceforth constitute the nation and shape its destiny. From the very beginning, the French revolutionaries introduced various measures and practices that could create a sense of collective identity amongst the French people. The ideas of La Patrie and Le Citoyen emphasised the notion of a united community enjoying equal rights under a constitution. A new French flag, the tricolour, was chosen to replace the former royal standard. The Estates-General was elected by the body of active citizens and renamed the National Assembly. New hymns were composed, oaths taken and martyrs commemorated, all in the name of the nation. A centralized administrative system was put in place and it formulated uniform laws for all citizens within its territory. Internal customs duties and dues were abolished and a uniform system of weights and measures was adopted. Regional dialects were discouraged and French became the common language of the nation.

A dam is a barrier across flowing water that obstructs, directs or retards the flow, often creating a reservoir, lake or impoundment. "Dam" refers to the reservoir rather than the structure. Most dams have a section called a spillway or weir over which or through which it is intended that water will flow either intermittently or continuously. Dams are classified according to structure, intended purpose or height. Based on structure and the materials used, dams are classified as timber dams, embankment dams or masonry dams, with several subtypes. According to the height, dams can be categorised as large dams and major dams or alternatively as low dams, medium height dams and high dams.

- (a) What does the word 'Dam' actually refer to?
- (b) Mention any one benefit of a Multi-purpose River Valley Project.
- (c) How have multi-purpose river valley projects a cause of social movements? Explain.

36. **Read the text carefully and answer the questions:**

Besides seeking more income, one way or the other, people also seek things like equal treatment, freedom, security, and respect of others. They resent discrimination. All these are important goals. In fact, in some cases, these may be more important than more income or more consumption because material goods are not all that you need to live.

Similarly, there are many things that are not easily measured but they mean a lot to our lives. These are often ignored. However, it will be wrong to conclude that what cannot be measured is not important. For development, people look at a mix of goals. It is true that if women are engaged in paid work, their dignity in the household and society increases. However, it is also the case that if there is respect for women there would be more sharing of housework and a greater acceptance of women working outside. A safe and secure environment may allow more women to take up a variety of jobs or run a business. Hence, the developmental goals that people have are not only about better income but also about other important things in life.

- (a) Explain how people look at a mix of goals for development with an example.
- (b) That which cannot be measured is not important for development. State a reason either in favour or against the statement.
